Introduction

About Resource Technology Corporation (RTC)

Established in 1988, we are an **importer** and **distributor** of Pharmaceutical Reference Standards and Substances from the European Pharmacopoeia (EP), British Pharmacopoeia (BP) and other major Pharmacopoeias and pharmaceutical reference standards producers from around the world. Our expertise in the importation process for these materials can save customers time, expense, and frustration, and result in timely and efficient delivery. Because we are located in the United States, it is easy to place and to follow up an order by telephone, fax, email or even by mail.

All orders are billed in U.S. Dollars, eliminating the cost and problems of currency fluctuation and conversion. We have all the necessary permits and registrations to broker orders through U.S. Customs, FDA, USDA, DEA, Home Land Security and other agencies. We have offices located near the major pharmacopoeias to expedite delivery.

Custom Packaging and Evaluation Services

RTC has recently completed construction of modern laboratory and production facilities and offers custom Pharmaceutical Reference Standard services to in-house secondary standards producers and laboratory users. We can work with material supplied by the client or procure third party materials. Services include:

- Vialing: crimp-top or screw-cap; multiple sizes.
- Ampuling: 2 mL, 5 mL, 10 mL, or 20 mL pre-scored amber ampules; Nitrogen or Argon blanketed.
- Container closure validation studies.
 - ❖ Full characterization
 - ❖ Traceability to compendial reference materials
 - ❖ Accelerated stability
- Toxic and hazardous chemical handling.

About the Catalog

This is the Resource Technology Corporation (RTC) *Catalog of Reference Materials for Pharmaceutical Analysis*. This catalog replaces the *Catalog of Reference Materials for Pharmaceutical Analysis* 2005 Edition, and all subsequent updates.

The information provided in the catalog is based on the "official" pharmacopoeial lists in January, 2007 and is correct at the time of print. Original descriptions and spellings used by the producers have been retained.

New products become available continuously and official pharmacopoeial lots change as current lots deplete. A regularly updated version of this catalog is available from our website at <http://www.RT-Corp.com>, where pages can be reviewed and downloaded for printing. Please check periodically for the latest information.

Pharmaceutical Reference Standards

Certification

The products described in this catalog include Pharmaceutical Reference Standards (or Substances) for use in pharmaceutical analysis. Pharmaceutical Reference Standards should be distinguished from Certified Reference Materials (CRM), which are produced in conformity with the ISO Guides 30 to 35 and supplied with a detailed certification document.

Pharmaceutical Reference Standards are produced for a specific purpose, and manufacturers follow rigorous protocols to ensure that they are fit for the intended purpose. The certification processes follows the basic requirements of the relevant ISO REMCO Guides but are modified by the pharmacopoeia to reflect the particular demands of the associated pharmaceutical monograph. Details are given in the introduction to each section listing the various Pharmaceutical Reference Standards collections in this catalog.

The production of Pharmacopoeial Reference Standards and Substances is specifically addressed in *ISO Guide 34 (Second Edition, 2000)*: "Pharmacopoeial standards and substances are established and distributed by pharmacopoeial authorities following the general principles of this Guide. It should be noted, however, that a different approach is used by the pharmacopoeial authorities to give the user the information provided by certificates of analysis and expiration dates. Also, the uncertainty of their assigned values is not stated since it is negligible in relation to the defined limits of the method-specific assays of the pharmacopoeias for which they are used."

Shelf Life, Storage and Expiration Dates

Pharmaceutical Reference Standards should be purchased when required and not stored for a prolonged period. Pack sizes are designed to allow a limited number of replicate analyses, as required by Good Analytical Practice, but the opened container should not be kept for future use. Please refer to product labels and/or accompanying documentation for appropriate short term storage conditions.

Specific lot numbers or letters are allocated to all Pharmaceutical Reference Standards, but no expiration dates are assigned by the Pharmacopoeias. New lots are normally prepared well in advance of the expected "sell-out" of the current lot.

When a substance is withdrawn from sale because the lot has been depleted, a final expiration date is provided; any material from the outgoing lot held by users must be used by the given date. This means that for a period of time both lots are "official."

If a material is withdrawn by the producer, then all stocks held by the users must be destroyed. Please note that such a situation is outside our control, and product prices are not refundable.

Impurity Standards

Impurities in a pharmaceutical substance can significantly change the effects and side effects of a drug. Therefore, it is important to have an accurate detection of impurities. The pharmaceutical monographs regulate the legal definition, the analysis and limits of impurities of a given substance.

Official impurity standards are available from the Pharmacopoeia where required in monographs. Other impurity standards are listed in the Pharmaceutical Impurities section of this catalog.

Controlled Substances

A number of Pharmaceutical Reference Standards, notably narcotics, tranquilizers and drugs of abuse, described in this catalog are considered Controlled Substances in the United States and/or in their country of origin. Those that are controlled in the United States are marked **Controlled Substance** beside the product description along with their **Schedule** of control assigned by the United States Drug Enforcement Administration.

The purchase, possession and use of Controlled Substances are subject to national and international regulation designed to limit their abuse. Before ordering, it is the responsibility of the customer to obtain any authorization necessary to purchase and to possess Controlled Substances, in compliance with the laws of the importing country.

Customers wishing to obtain Controlled Substances must contact RTC before ordering to clarify with the sales representative the relevant national requirements, the associated charges and consequential delivery times. All orders for Controlled Substances must be provided in writing and signed by an authorized person. The order must be accompanied with a copy of the original import permit and/or possession permit.

Use, Safety and Handling

Please read any documents supplied with the product before opening or using it. Pay particular attention to instructions referring to premixing, addition of diluent to lyophilized material, and to the minimum size of the sample to be used.

It is particularly important to check the size of the sample. This is determined by the producer, after homogeneity testing data is obtained as a part of the certification exercise. The use of smaller-than-recommended samples is one of the most common errors.

Some Pharmaceutical Reference Standards are toxic and require special handling. Virtually all Pharmaceutical Reference Standards have a pharmacological and/or biological activity. Therefore, we recommend that all products described in this catalog be handled as if they were bioactive, toxic or infective. Opened packs should be handled **only** by trained laboratory personnel.

We recommend a full risk assessment be carried out for every product purchased, including reference sources, such as *Martindale's Extra Pharmacopoeia* and the supplier's Material Safety Data Sheets (MSDS) for potential pharmacological effects.

All Pharmaceutical Reference Standards or Substances are for laboratory analytical use only and not for use in humans.

General Ordering Information

Pricing for each Pharmaceutical Reference Standard is listed along with the product description under each pharmacopoeia or supplier product listing. Some pricing may have been unavailable at time of printing, please contact RTC for the pricing of these products. Pricing and sample size are subject to change without notice. For products requiring special delivery procedures (cold pack shipping, special licensing, Controlled Substances, dangerous goods, etc), additional charges may be applied.

Please note that once delivered to the customer, Reference Standards are not returnable.

Customers requiring assistance with the purchase, use or application of a particular reference standard should contact RTC where technical staff is available to advise on the use and suitability of the products.

European Pharmacopoeia

Background

The European Pharmacopoeia (EP) Commission includes in its membership delegates from nations that have adopted the European Pharmacopoeia.

The EP Commission is in charge of judging the suitability of monographs. Prior to its release, a new monograph must be adopted by the EP Commission, then published in the annual 'Fascicle.' Member States then officially adopt the new monograph on January 1 of the following year.

To support the monographs of the European Pharmacopoeia, a collection of reference substances has been made available.

New lists of EP CRS are published three times each year. The list in this catalog is taken from EP list number 48, December, 2006 as updated through January 2007.

Relationship with Other Pharmacopoeia in Europe

Any reference substance, spectra or preparation required for a new EP monograph, is made available as soon as the monograph comes into force.

Many of the member countries of the European Pharmacopoeia Commission have adopted the EP in full, and their monographs require only EP CRS. When an EP monograph is adopted by the pharmacopoeia of a member state of the Council of Europe, any reference material that may have been available from a national pharmacopoeia, such as the British Pharmacopoeia (BP) or Pharmacopée Française (PF), is usually discontinued in favor of the EP reference substance.

However, a number of member countries of the EP Commission maintain national pharmacopoeial monographs, especially for finished dosage forms, that require the use of separate reference substances produced for the British, French, Swiss and International pharmacopoeia monographs. The International Pharmacopoeia (IP) reference substances are described in the section referring to the WHO (World Health Organization).

Production and Certification

European Pharmacopoeia reference substances and preparations are selected and verified by EP Laboratories as being suitable for use as described in the relevant monograph of the European Pharmacopoeia.

Because CRS and BRP are officially certified by the European Pharmacopoeia Commission, it should be noted that neither certificates of analysis nor data not relevant to the use of the products as defined by the EP monograph are provided with the reference product or substance.

Storage, Shelf Life and Expiration Dates

European Pharmacopoeia chemical reference substances are subject to regular inspection and repeated analysis by EP scientific staff. Each EP CRS is fit for the intended use when the customer receives it.

No expiration date is indicated on the reference material because the products or substances comply with the requirements of the corresponding monograph and are monitored regularly. When batches are to be changed, the EP CRS catalog shows the date on which the lot will no longer be official.

In specific cases for reasons related to filling or labeling, sub-batches a, b, c . . . are obtained from the same batch of bulk material. However, all necessary precautions are taken to guarantee the quality and specifications of sub-batches do not differ from one to another.

The European Pharmacopoeia (EP) recommends customers purchase sufficient material for immediate use. Unopened vials should be stored in the dark, unless otherwise stated. Most EP CRS can be shipped at ambient temperatures, however special shipping charges and storage conditions may apply.

Where no drying conditions are stated, a substance is to be used as received.

Once opened, the EP can no longer guarantee the stability of the material. Any remaining amount of a CRS not used, should be disposed of and not kept for future use.

Validation of Secondary Standards

All secondary working standards must be validated against the CURRENT batch of the EP CRS. We advise you to check that you have current batch numbers.

We can provide lists of current batch number of EP CRS.

Proper Use

All European Pharmacopoeia chemical substances or biological preparations listed in this catalogue are supplied exclusively as European Pharmacopoeia Chemical Reference Substances, Biological Reference Preparations or Reference Spectra (Ph. Eur. CRS, BRP or RS) for use as reference standards in tests and assays carried out in accordance with the official methods of the European Pharmacopoeia (Ph. Eur.) and for no other purpose.

Other uses are possible, but the user is responsible for determining the suitability of the EP CRS for any non-Monograph use.

Opening

For reference substances and preparations supplied in sealed glass ampules, the following technique is suitable for opening the ampule. Tap gently to collect the material at the lower end, score the ampule with a file, heat a glass rod to white heat and apply firmly to the file mark. If the glass does not crack, deepen and extend the file mark, and repeat the process. Eye and hand protection MUST be used.

Many reference substances are supplied as lyophilized material in a septum vial. No attempt should be made to open the vial and weigh the powder. It is important to follow precisely all monograph instructions. Material must be reconstituted in a buffer solvent and the resultant solution handled volumetrically.

Toxicity

Special precautions must be taken to avoid contact with certain reference substances, due to the potential toxicity of these substances. When identified, such substances should be manipulated utilizing appropriate personal protection equipment.

Following suggested EP guidelines does not replace the need to carry out a full hazard assessment.

Biological and blood products should be regarded as potentially hazardous to health and used and disposed of according to established laboratory safety procedures and regulatory requirements.

Controlled Substances

The EP list contains substances subject to controlled-substance regulations and schedules. Special ordering procedures may apply; please contact RTC for details and costs.

British Pharmacopoeia

Background

British Pharmacopoeia chemical reference substances (BPCRS) available from the BP, are issued under the authority of the British Pharmacopoeia Commission and are solely for use in tests and assays of the British Pharmacopoeia or the British Pharmacopoeia (Veterinary).

Production and Certification

British Pharmacopoeia reference substances and preparations are selected and verified by the BP Laboratories as being suitable for the use as prescribed in the relevant monographs of the British Pharmacopoeia.

Documentation

BPCRS are of two types – normal CRS for identification purposes and Assay Standards. Assay Standards are provided with a documented assay value, determined by the BP Laboratories. The values are given in a leaflet provided with the reference substance.

The BP laboratories do not make available any BPCRS certificates of analysis or other information, in connection with the prescribed use of the BPCRS.

Controlled Substances

Controlled drugs are subject to import and export control restrictions. Please contact RTC for details.

Shelf Life and Expiration Dates

British Pharmacopoeia chemical reference substances are subjected to regular inspection and repeat analysis by BP scientific staff. Each BPCRS, once received by the customer, is fit for the intended use. All BPCRS are supplied with at least three months shelf life.

BP supplies only current lots. For this reason users are advised to order only as required.

International Pharmacopoeia

The World Health Organization (WHO), a specialized agency of the United Nations with a primary responsibility for international health matters and public health, is the issuing body of the substances described in the International Pharmacopoeia. Progress towards better health requires international cooperation in the establishment of international standards for biological substances and pharmaceuticals. The WHO has therefore authorized the establishment and maintenance of a number of reference collections. Two are of particular interest to analysts involved in pharmaceutical and clinical measurement sciences: the collections of international biological reference substances and international chemical reference substances.

International Biological Reference Substances

The extensive range of biological reference substances was established to provide a means of ensuring International uniformity in the designation of the potency, activity or specificity of preparation that are used in the prevention, treatment or diagnosis of human or animal diseases, and for which chemical and physical assay terms are inappropriate.

WHO biological reference substances are needed for certain antibiotic and hormone assays described in a number of pharmacopoeia. The majority of the preparations of interest to the analyst working in the fields of pharmaceutical analysis are held by the NIBSC in England.

International chemical reference substances are established upon the advice of the WHO expert committee on specifications for pharmaceutical preparations. They are intended for use in physical and chemical tests and assays described in the specifications for quality control published in the International Pharmacopoeia (IP CRS), or as proposed in draft monographs.

The list in this catalog is based on the current (January 2007) WHO information.

Proper Use

While the primary application of IP CRS is in physical and chemical tests and assays as described in the International Pharmacopoeia, IP CRS do have application in other aspects of pharmaceutical analysis where a certificate of purity is required.

Documentation

Directions for use and analytical data are provided in certificates distributed with the IP CRS. The certificates show how the identity and purity of the material was confirmed, and in many cases demonstrate traceability to another PRM. This information fulfills most of the requirements of a Certification Report as defined by the ISO Guides on the preparation and use of the Certified Reference Materials.

Shelf Life and Expiration Dates

International Pharmacopoeia chemical reference substances are subject to regular inspection and repeated analysis by the WHO Collaborating Center scientific staff. Each IP CRS is, on receipt by the customer, suitable for the intended use. Shelf life and expiration dates are not given, and IP advises that once opened, vials should not be stored for long periods of time.

Only current lots are supplied by IP. For this reason users are advised to order only as required. Once opened IP can no longer guarantee the stability of the material and any of the CRS not used should be disposed of.

Official Reference Standards

USP Reference Standards are required for use in pharmacopeial assays and tests in the official standards publication, the United States Pharmacopeia-National Formulary (USP-NF). USP Reference Standards help to ensure compliance with the official, FDA-enforceable quality requirements in the USP-NF. USP Reference Standards also lend themselves to many other applications, including measurements required to obtain accurate and reproducible results in modern chromatographic and spectrophotometric methods.

Rigorous Testing and Quality Control

USP Reference Standards are selected for their high purity, critical characteristics, and suitability for the intended purpose. Unless a USP Reference Standard label states a specific potency or content, the USP Reference Standard is taken as being 100.0% pure for the USP purposes for which it is provided.

USP Reference Standards are established through a process of rigorous testing, evaluation, and quality control. They are independently tested in three or more laboratories – USP, FDA, and academic and industrial laboratories throughout the United States. The Reference Standards are released under the authority of the USP's Board of Trustees, on the recommendation of the USP Reference Standards Expert Committee, which approves selection and suitability of each lot.

Proper Use of USP Reference Standards

USP offers Reference Standards for pharmaceuticals, excipients, and dietary supplements. USP Reference Standards are provided primarily for quality control use in conducting pharmacopeial assays and tests described in the USP-NF. Neither Reference Standards nor Authentic Substances are intended for use as drugs, dietary supplements, or medical devices.

To serve its intended purpose, each USP Reference Standard must be properly stored, handled, and used.

Users must ascertain that the Reference Standards they are using are from an official lot. Note: USP only ships official lots. When a current official lot is depleted, it remains official for about a year unless its official status is withdrawn by USP. RTC can provide information regarding current and official lots.

Users must determine the suitability of Reference Standards for applications and uses not in the USP-NF.

Pharmacopée Française

The list of reference substances and reference spectra available from the Pharmacopée Française (PF) are issued under the authority of the PF and are solely for use in tests and assays of the Pharmacopoeia Française and Pharmacopoeia Française (Vétérinaire).

All PF CRS are available in restricted quantity and orders for multiple units will be reduced to a single unit.

Proper Use

Reference substances from the PF are designed for specific monograph applications. Other uses are possible, but the user is responsible for checking the suitability of the PF CRS for any non-monograph use.

Shelf Life and Expiration Dates

Pharmacopée Française chemical reference substances are subject to regular inspection and repeated analysis by PF scientific staff. Each PF CRS, once received by the customer, is fit for the intended use. The shelf life and expiration date are not given, and PF advises that unopened vials should not be stored for a long period of time.

The Japanese, United States, and European Pharmacopoeias are the three major pharmacopoeias in the world. They have established regular lines of communication and have set up a program that is working towards the harmonization of monographs and standards.

Reference Standards specified in the Japanese Pharmacopoeia (JP) are supplied by the National Institute of Hygienic Sciences, (Kokuritsu Eisei Kenkyusyo (KEK)) who produce chemical reference Standards for the Society of Japanese Pharmacopoeia. Products are described in the following list.

Proper Use

The correct use of JP reference standards and reagents needed to follow the monographs of the JP is described in the current version of the Japanese Pharmacopoeia. As with the reference standards from other pharmacopoeia, JP Reference Standards are intended only for the applications as described in monographs of the Japanese Pharmacopoeia and they should not be used for any other applications.

Shelf Life and Expiration Date

Japanese Pharmacopoeia Reference Standards are subject to regular inspection and repeated analysis by KEK scientific staff. Each JP Reference Standard is fit for the intended use. Shelf life and expiration dates are not given, and once opened vials should not be stored.

Only current lots are supplied by JP. For this reason users are advised to order only as required. Once opened, the JP can no longer guarantee the stability of the material and any of the Reference Standard not used should be correctly disposed of.

Pricing

Due to price fluctuations, please contact RTC for pricing on Japanese Pharmacopoeia Reference Standards.

JP policies prohibit the export of certain reference standards outside of Japan. Call RTC for availability.

Background

The pharmacopoeial monographs regulate the legal definition but also the analysis and the limits of impurities in a given substance. Impurities in a pharmaceutical substance can change the effects and side effects of a drug significantly. It is therefore important to have an accurate detection of impurities.

The increasing importance of impurity reference materials is also becoming apparent in the registration of drugs, where an exact identification and quantification of impurities is required for documentation. A wide range of known impurities is listed in individual pharmaceutical monographs. However, impurities that are still protected by a patent as well as those that are only known to the manufacturer are not listed.

Guidelines for impurities have been laid out in the monographs, from the manufacturer internally or in the International Conference on Harmonization (ICH) Guidelines which have been agreed by Europe, Japan and the United States. As a rule, a limit of 0.1% is set, and control of toxic impurities lies well below this limit.

Three ICH-Guidelines

ICH Q3A (R2): Impurities in New Drug Substances

The guideline addresses the chemistry and safety aspects of impurities, including the listing of impurities in specifications and defines the thresholds for reporting, identification and qualification.

ICH Q3B (R2): Impurities in New Drug Products

The guideline provides advice in regard to impurities in products containing new, chemically synthesized drug substances. The guideline specifically deals with those impurities which might arise as degradation products of the drug substance, or arising from interactions between drug substance and excipients or components of primary packaging materials.

ICH Q3C (R3): Impurity Guidelines for Residual Solvents

The guideline recommends the use of less toxic solvents in the manufacture of drug substances and dosage forms, and sets pharmaceutical limits for residual solvents (organic volatile impurities) in drug products.

The full wording of the ICH-Guidelines is available at the official website of the ICH: www.ich.org.

Mikromol GmbH

The pharmaceutical impurities listed in this section are supplied by Mikromol, a company formed in 1993 by a team of chemists and pharmacists. Mikromol has extensive experience in a wide range of chemical processes and techniques and is able to supply chemical reference substances in mg quantities. The company also has strengths in research and development, including steroids, and can produce customized pharmaceutical impurities on request (for more information about this service, please contact RTC).

Production and Certification

Mikromol is accredited to the ISO 9001:2000 and ISO 13485 quality standards. Mikromol also conforms with cGMP guidelines for characterization, analysis and associated certification. Each product is accompanied by a detailed certificate of analysis, which gives information on identity and purity, together with the various analytical methods and their conditions.

Narcotics

Some of the substances described in this section are subject to narcotics legislation. These are marked as Controlled Substance. Please contact RTC for information on the legal requirements to purchase these products.

Delivery Time

The majority of products mentioned in this section are available from stock; others may have a delivery time of approximately four weeks. For custom synthesis, the time is estimated from previous experience. Customers will be notified if unforeseen complications arise during the synthesis. In the unlikely event that a synthesis does not reach the expected result, we reserve the right to cancel the order.

Certified Viscosity Standards

Liquids with a certified viscosity are produced by Van Swinden Laboratories BV and are distributed by RTC.

Viscosities are certified in kinematic viscosity (mm²/s) and in dynamic viscosity (mPa.s).

Liquids have a shelf life of 12 months, as long as they are stored protected from light, unopened, and at temperatures between 10 °C and 35 °C.

Customer supplied liquids can be certified at temperatures between 15 °C and 140 °C. Please ask for a quote.

Standard liquids are available from stock, in 250 mL packs and certified at 20°C. The price is \$329 each. The following viscosities are available:

The use of coloring agents in pharmaceutical preparations and dosage forms is widespread. In most cases food coloring materials are used.

The following standards of dyes, used in the pharmaceutical and food industry, are listed with common description, E code and color index number (C.I.) for an easy assignment.

The IBPO is accredited by the Polish Centre for Testing and Certification according to the standard PNEN 45001 and ISO/IEC Guide 25:1990.

Each color reference standard is supplied with a detailed certificate of analysis which includes dye content value determined by spectrophotometry and values of impurities.

International Commission on Pharmaceutical Enzymes

The Commission on Pharmaceutical Enzymes was formed in 1960, with a remit to establish quantitative methods and an exact definition of enzyme activity for pharmacologically significant enzymes.

One consequence of the work of FIP (Federation International Pharmaceutique) has been the production and certification of reference substances for both enzymes and substrates.

More recently the work of the Commission has been reflected in those monographs of the European Pharmacopoeia which call for enzyme standards. The FIP products marked (EP) in this list are those which are required in certain EP monographs.

The revised EP general method 2.2.6 replaces CRS reference liquids with certified reference materials available from suppliers of chemical reagents or materials certified for metrology.

10 liquid CRMs, certified by the Physical Chemistry Division of the Central Office of Measures (GUM), Warsaw in Poland, cover the wide range of refractive index from 1.333 (water) to 1.657 (1-bromonaphthalene).

These CRMs are intended for calibration and checking refractive index scales of laboratory refractometers of an uncertainty expected not less than ± 0.00005 .

The n values were determined on a Pulfrich refractometer, previously calibrated with solid class 1 CRMs, for which values were established using goniometric procedures.

All CRMs are supplied with a certificate. Certified values to 5 significant figures for the refractive index at $\lambda = 589.3 \text{ nm}$ $t = 20^\circ\text{C}$ and associated uncertainties are given.

Reference liquids are packed in glass ampules (7.1, 7.2, 7.5, 7.6, 7.8) or plastic drop-bottles (7.11, 7.12, 7.13, 7.20, 7.21).

These Reference Standards are produced under appropriate cGMP and ISO processes in a specially designed facility. An extensive ISO compliant Certificate of Analysis is provided with each Reference Standard, with details of qualification versus the appropriate Pharmacopeial Reference Standard, characterization methodology and results, and statistics generated from results. Each Reference Standard is packaged in a size that contains ample amounts to conduct multiple tests.

In addition to offering a catalog range of Reference Standards, we can produce products to meet specific customer needs: these Reference Standards can be made for your exclusive use or added to the catalog offering. Please contact us to discuss your specific needs.

Chemical/Physical Standards for compliance with USP General Chapters

A range of Reference Standards specifically designed to be used for calibration and control of methods from the USP General Chapters are in development and will be available soon. Convenient packaging will allow the user to quickly and easily calibrate their analytical devices. As with all RTC Reference Standards, they will be accompanied by ISO compliant Certificates of Analysis demonstrating traceability to USP and NIST, as appropriate. Reference Standards for the following methods are in production:

- Total Organic Carbon <643>
- pH <791>
- Conductivity <645>

Please contact us for details.

Proficiency Testing Schemes (PT)

The trend for Pharmaceutical Laboratories to seek accreditation to ISO 17025 is increasing at a rapid rate. A key requirement of ISO 17025:2005 is that laboratories must demonstrate proficiency in accredited analytical techniques whenever a PT scheme is available. The regular use of PT samples from a 3rd party provider is recognized by accreditation bodies as the best way of demonstrating proficiency. RTC is an accredited (A2LA) PT provider and has more than 15 years experience in the design, provision, and management of PT programs. We have used our experience to develop new PT programs made up of samples designed for Pharmaceutical Laboratories which will demonstrate proficiency in the Microbiological, Chemical, and Physical tests described in USP General Chapters. Please contact us for a program designed to meet your specific needs.

RTC offers contract services as a complement to your own in-house Reference Standards program. We specialize in subdivision into small multi-use units and analytical qualification and characterization, all at an attractive and competitive price. The dry, high altitude environment of our facility is ideal for subdivision of most pharmaceutical materials.
